DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 and 10-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Oshio et al. (US 6,515,476 B1).

With respect to claims 1, 10 and 11, Oshio discloses in the US Patent 6,515,476 a magnetic resonance imaging system comprising a reconstruction unit arranged to reconstruct a complex image of complex valued pixels from magnetic resonance signals compute a distribution of phase values of the complex image apply a phase correction to the complex image to form a corrected magnetic resonance image (column 3, lines 21-39) and control the phase correction on the basis of the distribution of phase values of the complex image (column 3, lines 21-39).

3. With respect to claim 2, Oshio discloses the distribution of phase values of the complex image is represented by a histogram of the phase values of the complex image (column 9, lines 1-27).

4. With respect to claim 3, Oshio discloses the phase correction is controlled on the basis of the test function of the histogram (column 9, lines 16-52).

Art Unit: 2859

5. With respect to claim 4, Oshio discloses the test function of the histogram discriminates, in particular enhances peaks, peaks in the histogram from broader distributions (column 9, lines 16-52).
6. With respect to claim 5, Oshio discloses the test function is formed by the histogram power function (column 9, lines 16-52).
7. With respect to claim 6, Oshio discloses the reconstruction unit is arranged to make the phase correction on the basis of a polynomial phase correction, said polynomial being represented by its polynomial coefficients (column 9, lines 16-52).
8. With respect to claim 7, Oshio discloses the reconstruction unit is arranged to control the phase correction by adjusting polynomial coefficients of the polynomial phase correction (column 9, lines 16-52).
9. With respect to claim 8, see rejection to claims 5 and 6 above.

Allowable Subject Matter

10. Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
11. The following is a statement of reasons for the indication of allowable subject matter:
 - a. With respect to claim 9, the claim has been found allowable over the prior art of record because the prior art of record fails to teach or fairly suggest a magnetic resonance imaging system wherein the polynomial coefficients are adjusted by way of a trail and

improve algorithm controlled on the basis of the test function in combination with the remaining limitations of claims 1, 3 and 8 above.
